Diesel Vehicle Regulation Overview

Course #512

The Air Resources Board has several new and existing regulations designed to reduce emissions from diesel vehicles used in California in a variety of activities including on-road commercial trucks and busses; diesel vehicle idling; transport refrigeration units (TRU); drayage trucks used at ports; construction; mining, other off-road; and other industries. Additionally diesel vehicles used in California may also be impacted by a regulation to reduce greenhouse gas emissions from tractor-trailer combinations by requiring the use of certain U.S. EPA SmartWay approved technologies. These regulations are needed to meet federal air pollution mandates, reduce the public's exposure to cancer-causing exhaust, as well as decrease the carbon footprint from diesel powered vehicles. The regulations require owners to report to ARB and then to retrofit, repower, or replace their diesel-fueled vehicles gradually over the next decade.

To assist these owners with their compliance efforts, Course 512 provides an overview of each regulation, compliance requirements as well as funding opportunity information. In addition, the training provides access to other assistance tools such as toll free numbers, main contact information, access to program webpages, list serves, and program updates to help navigate the information available at the ARB.

October 14, 2011
9:00 AM – 3:00 PM

San Joaquin Valley Air Pollution Control District

Central Region Office
1990 E. Gettysburg Ave.
Fresno, CA 93726

Video Teleconference to:

Northern Region Office
4800 Enterprise Way
Modesto, CA 95356

Southern Region Office
34946 Flyover Court
Bakersfield, CA 93308
